Multiple Reflections:

Comparison of Frameworks for Promoting Youth Learning and Healthy Development

By Sam Piha and Samantha Fasen
ACKNOWLEDGEMENTS

SPECIAL THANKS to all of the individuals and organizations that were referenced in this paper, and for all of their contributions to the field. We also want to thank Stacey Daraio for her suggestions and edits, Dr. Roger Weissberg (CASEL) for his feedback and to the S.D. Bechtel Jr. Foundation for their support over the years and their support for this paper.

ABOUT THE AUTHORS

Sam Piha has served as founder and president of Temescal Associates since 2007. Sam began his career in 1974 as an afterschool worker, an experience that led to 13 years of classroom teaching and work as a child and family counselor and school social worker. Between 1989 and 2006, Sam managed school-based youth programs at the regional and national levels. He served and editor and contributing author of several important practice guides and journal articles on afterschool programming. Sam holds a Masters Degree in Social Welfare.

Samantha Fase joined Temescal Associates and the How Kids Learn Foundation in 2019 and has fully embraced her work with the afterschool field. She helps to coordinate and develop marketing campaigns and multimedia elements to reach a wider audience and share with people the importance of out-of-school time and youth development.

ABOUT THE ORGANIZATIONS

Temescal Associates is dedicated to building the capacity of leaders and organizations in education and youth development who are serious about improving the lives of young people. Their clients include leaders of youth serving institutions and organizations, school and youth program practitioners, public and private funders, intermediary organizations, and policy makers.

The HKL Foundation is a 501(c)(3) organization. It is dedicated to improving the effectiveness of settings that support the education and healthy development of youth. This includes schools and out-of-school time programs.

The HKL Foundation provides educational and training activities that promote the capacity of organizations that support the education and healthy development of youth. Examples of activities include conferences, speaker forums, screenings of relevant films, training sessions, coaching sessions, the awarding of digital badges to acknowledge exemplar programs and the learning that happens within these settings. Activities also include the development and distribution of educational materials (papers, self-assessment tools, videos, program guides, etc.).

INTRODUCTION

Overview

Every year researchers and experts on youth learning and development issue reports with new concepts and frameworks. They are developed to guide the design and implementation of community initiatives, schools and youth programs.

According to Explore SEL at Harvard Graduate School of Education, “The complex and conflicting terminology used in the field can make it difficult to sort through and compare all the information out there to determine which approach works best for you. This lack of clarity can be both overwhelming and confusing. Without a way to make sense of the words, it becomes easy to misinterpret, over-generalize, or overlook the science that links evidence to strategies, and strategies to measurement and evaluation. When this happens, the links that connect different points along the research-to-practice cycle become lost or obscured, and the cycle breaks down.”

“ In the past several years, a large number of frameworks and standards have been created to provide guidance on what young people need to learn.”
- UChicago Consortium on School Research

While many of these frameworks and their critical features are not “new” or surprising, they do offer a more granular examination or focus on a specific issue. These frameworks include (not an exhaustive list):

- Youth Development
- Foundations for Young Adult Success
- The Learning in Afterschool & Summer Learning Principles (LIAS Principles)
- Social Emotional Learning (SEL)
- Trauma-Informed Practices
- The Science of Learning and Development (SoLD) and Whole Child Development
- Program Quality Standards

“It sometimes feels like risking whiplash to try to follow all the emerging trends in our field and the potential funding, resources and opportunities that come along with them. Every few years, sometimes more often, there are new trends that are often accompanied by or are a part of funding opportunities. Some of these trends stick around for a while until something newer, younger and sexier gets introduced. Some trends seem to come around in cycles.”
- Rebecca Fabiano, Fab Youth Philly

It is important for youth program leaders to closely follow the release of new frameworks and to be literate in and able to integrate the language and concepts they offer. Many of these frameworks have critical features in common with and are born out of earlier youth development frameworks.
The purpose of this paper is to compare recent frameworks and note their commonalities. Below we offer a summary or overview of many of these frameworks as well as resources to learn more. We also provide a crosswalk chart to learn where their critical features overlap. (Note: Harvard’s Explore SEL has catalogued a large number of program frameworks and allows the reader to explore and compare frameworks to others in the field.)

Why a Framework?
There are several ways that a framework is useful. To begin, it summarizes existing knowledge and helps us by creating a common language. A framework also gives direction and purpose to a program. Knowing the important components of a framework can help guide staff and volunteers toward programming intended to achieve specific positive outcomes. A framework can help provide direction for program evaluation, as well, to identify items on which an evaluation can focus. Finally, a framework which is validated and accurate can identify more clearly what the long-term outcomes are that youth programs are helping to create. To learn more we recommend CASEL’s Frameworks Briefs (3).

Systems Approach
We know that individual youth programs do not stand alone. They are impacted by their own parent organizations, funders, local communities and policymakers. Zoom out and one will see they are nested within a larger system, like Russian nesting dolls. Many of these frameworks name critical features for the larger systems of influence. Below is an example, see figure 1.1. However, for the purposes of this paper, we only focus on frameworks that address individual youth program practices.

Figure 1- Source: www.puccimanuli.com
Building Staff Capacity
In order to shape program practices in alignment with a chosen framework requires a great deal of work. This includes the building of staff capacity through training and a program improvement process. While this is not always explicit, this should be assumed when reviewing program practice frameworks.

Afterschool Learning: What Do We Call It?
What do we call the learning time outside of the classroom? In this paper we will use the term “afterschool” or “youth programs.” Learning time outside of the classroom is also referred to by others as “out-of-school time” (OST), “expanded learning opportunities (ELO)”, “expanded learning time” (ELT), and “expanded learning programs” (ELP).

A Historical Perspective
In examining afterschool frameworks it is useful to have a historical perspective on the afterschool movement which began in the late 1800’s. To learn more, check out Youth Development Guide 2.0 and The History of Afterschool in America, a 60-minute documentary and read, Making Play Work: The Promise of Afterschool Programs for Low-Income Children by Robert Halpern.
FRAMEWORKS: OVERVIEWS AND SUMMARIES

Youth Development
The Youth Development framework we cite is based upon the youth development framework created by researchers, James Connell and Michelle Gambone. Drawing on their understanding of the fundamental ideas underlying the youth development approach, we can now begin to look more closely at the kinds of experiences we can offer young people in afterschool programs to help them learn and grow.

"The principles undergirding this youth development framework are as relevant today as when it was created. It is well aligned with our new learnings from both research and practice -- from the importance of relationships and social emotional learning to considering the kinds of short and longer term outcomes we seek that enhance success in school, work and life. It remains especially important for increasing intentionality around both the program opportunities we create for and with youth and especially the ways communities contribute systematically to ensuring these are available. This is youth development and community development framing at its best." - Dale Blyth, Extension Professor Emeritus and Sr. Research Fellow, University of Minnesota

This youth development framework names 5 key experiences which are crucial to promoting young people’s healthy development and creating successful learning environments:

- Promoting a sense of physical and emotional safety
- Encouraging relationship building
- Fostering meaningful youth participation
- Providing opportunities for community involvement
- Creating challenging and engaging learning experiences that build skills

Key Experiences for Healthy Development

Young People Must Experience:

- PHYSICAL AND EMOTIONAL SAFETY: so that young people feel secure and can take risks that help them grow;
- MULTIPLE SUPPORTIVE RELATIONSHIPS: where young people receive guidance from adults and emotional and practical support from both adults and peers, so that they learn to connect;
- MEANINGFUL PARTICIPATION: through which young people experience real involvement and decision-making so that they are able to take on leadership roles and gain a sense of belonging;
- COMMUNITY INVOLVEMENT: where young people gain an understanding of the greater community so that they feel able to make an impact in and be a productive part of their community;
- CHALLENGING AND ENGAGING LEARNING EXPERIENCES: through which young people build a wide array of skills and competencies and experience a sense of growth and progress.

Foundations for Young Adult Success

The Foundations for Young Adult Success developmental framework is from the UChicago Consortium on School Research. It characterizes the experiences and relationships youth need to develop into young adults who have agency, an integrated identity, and the requisite competencies to successfully meet the complex challenges of young adulthood and become thriving, contributing members of their communities.

This framework identifies three key factors of young adult success: agency, an integrated identity, and competencies. It then names four foundational components:

- Self-regulation
- Knowledge and skills
- Mindsets
- Values that underlie the above

It takes into account what we know about how children develop, considers how the backgrounds of and contexts in which young people live affect their development and makes the intentional provision of opportunities for young people to experience, interact, and make meaning of their experiences the central vehicle for learning and development.

The Learning in Afterschool and Summer Learning Principles
Temescal Associates launched the Learning in Afterschool (LIAS) to address a great debate as to whether afterschool programs should be focused on academic or youth development outcomes. It was designed to unify the field of afterschool and focus the movement on promoting young people’s learning.

If afterschool programs are to achieve their full potential, they must be known as important places of learning that excite young people in the building of new skills, the discovery of new interests, and opportunities to achieve a sense of mastery. The LIAS Learning Principles became a foundational part of the California Quality Standards for Expanded Learning Programs.

"We spend so much time focused on 'achievement' and so little time focused on how to motivate students to learn. The principles advocated by LIAS strikes the right balance and make sense... The principles contained in LIAS promote such an approach, and if applied with fidelity, could lead to real improvements in educational outcomes for kids.” - Pedro Noguera, Dean, USC Rossier School of Education

The LIAS project promotes five core, “evergreen” learning principles that should guide the design and implementation of afterschool programs.

- Effective Learning is Active
- Effective Learning is Collaborative
- Effective Learning is Meaningful
- Effective Learning Supports Mastery
- Effective Learning Expands Horizons

1. Learning that is Active
   Learning and memory recall of new knowledge is strengthened through different exposures – seeing, hearing, touching, and doing. Afterschool & summer activities should involve young people in “doing” – activities that allow them to be physically active, stimulate their innate curiosity, and that are hands-on and project-based.

2. Learning that is Collaborative
   Afterschool & summer programs should help young people build team skills that include listening to others, supporting group learning goals, and resolving differences and conflicts. Collaborative learning happens when learners engage in a common task where each individual depends on and is accountable to each other.

3. Learning that is Meaningful
   Learning is meaningful when youth have some ownership over the learning topic, the means to assess their own progress, and when the learning is relevant to their own interests, experiences, and the real world in which they live. Community and cultural relevance is important to all youth.

4. Learning that Supports Mastery
   If young people are to learn the importance and joy of mastery, they need the opportunity to learn and practice a full sequence of skills that will allow them to become “really good at something.” Afterschool & summer activities should be explicitly sequenced and designed to promote the layering of new skills.

5. Learning that Expands Horizons
   Afterschool & summer programs should provide learning opportunities that take youth beyond their current experience and expand their horizons. They should go beyond the walls of their facilities to increase young people’s knowledge of their surrounding neighborhood and the larger global community.

Social Emotional Learning (SEL)
There is now a strong consensus that young people need more than reading and writing skills if they are to be successful in school, work, and life. According to the California Department of Education’s Expanded Learning Division, “there is a growing body of research proving that social and emotional learning (SEL) is fundamental to academic success, and must be woven into the work of every teacher in every classroom and every after school and summer enrichment program, if we truly want to prepare all our students for college and careers.”

“The concept of social emotional learning has come to a frenzy in the past couple of years. Where does afterschool fit in to all of this? You would hope that we’d be right at the forefront. We’ve been doing this for years we know how to do it.” – Karen Pittman, Forum for Youth Investment

According to The Collaborative for Academic, Social and Emotional Learning (CASEL), SEL is “social and emotional learning (SEL) is an integral part of education and human development. SEL is the process through which all young people and adults acquire and apply the knowledge, skills, and attitudes to develop healthy identities, manage emotions and achieve personal and collective goals, feel and show empathy for others, establish and maintain supportive relationships, and make responsible and caring decisions.”
The CASEL framework names 5 critical youth competencies:

- Self-Awareness
- Social Awareness
- Relationship Skills
- Responsible Decision Making
- Self-Management
The Expanded Learning 360°/365 Collaborative Project, under the leadership of The Partnership for Children & Youth (PCY) formed a research group to develop a program framework that encompassed both SEL and character building. They developed a framework shown below and wrote several papers detailing this framework including Student Success Comes Full Circle: Leveraging Expanded Learning Opportunities.

**Trauma-Informed Practice**

According to a report entitled, *Trauma-Resilient Informed Practices in Expanded Learning Programs: A Snapshot of Trends in the Field*, “trauma impacts individuals from all walks of life. The long-lasting effects of trauma can create barriers in the lives of those impacted. Trauma may cause devastating consequences for young people in their social and emotional development, academic achievement, and overall wellbeing. However, when provided with the right supports, young people can not only gain better coping skills, but they can also tap into their abilities to be resilient, overcome adversity, and even transform adversity into strength.”

> “High doses of adversity not only affect brain structure and function, they affect the developing immune system, developing hormonal systems, and even the way our DNA is read and transcribed…” - Dr. Nadine Burke Harris, California Surgeon General

This report goes on to say, “as expanded learning programs across the United States continue to become more aware of the effects of trauma on young people’s lives, leaders and staff in the field are examining how they can better support these young people by leveraging the many assets that are already part of expanded learning programs. As the implementation of trauma-resilient informed practices in expanded learning programs gains more traction, questions and considerations are surfacing in terms of what it means to build the capacity of staff and leadership and to create systems that are trauma-resilient informed for the field of expanded learning.”

> “In the Los Angeles Unified School District (LAUSD), where 80% of students live in poverty, 98% of students reported experiencing one or more stressful or traumatic life event in the past 12 months and at least half suffer from moderate to severe symptoms of Post-Traumatic Stress Disorder (PTSD).”
> – Eric Gurna, LA’s BEST

In the article by Brandy Maynard, Anne Farina and Nathaniel Dell entitled *Protocol: Effects of Trauma Informed Approaches in Schools* they offer a framework which names 6 critical principles:

- **Safety:** An environment where kids feel physically, emotionally, and culturally safe; helps kids regulate and fosters relationship building. Important components of this are staff to youth ratios and physical space.
- **Trustworthiness & Transparency:** Programming is predictable and consistent to alleviate any fear or anxiety that may be created by the unknown; youth know what to expect when arriving at the program.
- **Peer Support**
- **Collaboration & Mutuality:** The understanding that learning happens in relationships; staff who intentionally work to make all youth feel like they belong and help youth to develop new skills allows for greater social-emotional learning.
- **Empowerment, Voice and Choice:** Traumatic experiences steal an individual’s autonomy and ability to make choices for oneself. Providing opportunities for youth to have choice within programming and choice in directives can help fill that void.
• **Cultural, Historical and Gender Issues**: Increases community leadership; builds inclusive practices; respects individuals; and utilizes culturally relevant and sensitive practices, language, and communication. Acknowledging the behaviors youth have developed and helping them reframe those behaviors can be an incredibly powerful message.

![Diagram of Six Principles and Four Key Elements]

Dr. Shawn Ginwright offers a different view of how we respond to young people who have experienced trauma. He suggests that we should consider community trauma instead of only the individual. He states in his article *The Future of Healing: Shifting from Trauma Informed Care to Healing Centered Engagement*, “a shift from trauma informed care to healing centered engagement (HCE) is more than a semantic play with words, but rather a tectonic shift in how we view trauma, its causes and its intervention. HCE is strength based, advances a collective view of healing, and re-centers culture as a central feature in well-being. Researchers have pointed out the ways in which patients have redefined the terms used to describe their illnesses in ways that affirmed, humanized and dignified their condition.”

> “While trauma informed care offers an important lens to support young people who have been harmed and emotionally injured, it also has its limitations. For me, I realized the term slipped into the murky water of deficit based, rather than asset driven strategies to support young people who have been harmed. Without careful consideration of the terms we use, we can create blind spots in our efforts to support young people.”
> – Dr. Shawn Ginwright (SFSU) *The Future of Healing*

The Science of Learning and Development (SoLD) and Whole Child Development

According to the American Institutes for Research (AIR), “SoLD is a collaborative effort to combine findings from diverse areas of research, from neuroscience to human development, into an integrated science of learning and development—a body of work that can bolster the youth development field’s efforts in afterschool systems and settings to ensure that all young people have the opportunity to thrive. The findings from SoLD add to our understanding of youth development in afterschool settings and systems.”

"This science provides the biological rationale for the positive relationships and safe, supportive environments that researchers and practitioners have found to be so important and effective." - Katie Brackenridge, Turnaround for Children, Supporting the Whole Child in Afterschool (LIAS Blog)

Turnaround for Children developed a framework naming 5 Non-Negotiables for Whole-Child Design to describe how we should prioritize our work in afterschool programs:
- Positive developmental relationships
- Environments filled with safety and belonging
- Integrated supports
- Intentional development of critical skills, mindsets and habits
- Rich instructional experiences

Quality Program Standards for Expanded Learning

The purpose of Quality Standards is to describe high levels of “quality” of a youth program. Quality standards have been developed by national organizations and state and local networks. Quality standards are not intended to serve as a compliance tool, but are designed to guide programs in the implementation and assessment of program quality. For the purpose of this paper, we will reference California’s Quality Standards for Expanded Learning and focus on the standards that pertain to “Point-of-Service” or program practices that are aimed at youth.
The California Quality Standards for Expanded Learning focuses on 6 critical point-of-service areas:

- Safe and Supportive Environment
- Active and Engaged Learning
- Skill Building
- Youth Voice and Leadership
- Healthy Choices and Behaviors
- Diversity, Access and Equity

**California’s Quality Standards for Expanded Learning**

ADDITIONAL CONSIDERATIONS

Identity and Equity
It is important to note that many of the frameworks detailed above do not address the important issue of youth identity and equity. We have learned that how youth identify (LGBTQ+, race, gender, etc.) must be considered in addressing youth needs. It is important that we work to ensure that ALL youth have access to and feel a sense of positive belonging in afterschool programs.

RESOURCES TO LEARN MORE:
Temescal Associates and The How Kids Learn Foundation have developed many blog posts and recording of webinars addressing identity and equity

Websites:
• Forum for Youth Investment: Equity

Videos:
• History of Afterschool in America (see interviews with Lynn Johnson and Ashanti Branch)

Program Practices
Any framework adopted by an afterschool program only comes to life when it is aligned with program practices and staff development. This alignment can be assured by entering into a thorough program improvement process. We recommend Youth Development Guide 2.0 which offers a description of inventive program practices and staff development activities which support the practices.

COVID-19
Because of the COVID-19 pandemic, afterschool programs had to amend their practices to account for the pandemic and in some cases, the need for distance learning. Many national, statewide and local organizations have included COVID-19 resources and information. Some of these are listed below.

FRAMEWORKS CROSSWALK
All of the frameworks detailed above name critical features (some use other terms like experiences, components, non-negotiables, principles, factors, or competencies) that are deemed essential. They are all useful in guiding the design and implementation of youth programs, their values and intentions; along with program practices, activities, and assessment tools to gauge fidelity and effectiveness.

Although they do not use these terms, they are essentially about love, acceptance, respect for self and others, mentorship, agency, and preparing youth for success in school, work and life.

“Youth developers will see the immediate parallels to expanded learning quality standards and the principles of Learning in Afterschool and Summer from Temescal Associates...High quality afterschool programs specialize in positive relationships, safe and supportive environments, and engaging activities. Afterschool plays a vital role in supporting learning and well-being by focusing on these core areas of expertise and experience.- Katie Brackenridge, Turnaround for Children, Supporting the Whole Child in Afterschool (LIAS Blog)
In figure 10, *Frameworks Crosswalk*, we have used the Youth Development framework as our baseline and sought to align the critical features of the other frameworks detailed above. Regardless of which framework a program uses to guide their design and implementation, one should be aware of the other frameworks, both their similarities and their differences.
